Art Unit: 1616

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 53, 56, 58, 60, 64, 66-68, 74-82 are rejected under 35 U.S.C. 103(a) as being unpatentable over Bodmer et al (US 5,538,739) in view of GB 2,145,422 and Reiners et al (US 4,879,402).

Bodmer et al teach a matrix comprising octreotide (abstract). Linear polylactide – coglycolides of MW 25K-100K and a polydispersity of 1.2-2 are disclosed (column 8 lines 1-4). Star polymers are specified (column 8 line 35). Esters with glucose are disclosed (abstract). Lactide glycolide ratios of 60:40-50:60 are specified (column 8 lines 14-20). A method of making using that of GB 2,145,422 is specified (example 2). However, Bodmer et al do not teach removal of Sn octoate.

GB '422 teaches a method of making the polymer wherein the catalyst Sn octoate is preferred (page 2 line 41). Purification in the conventional manner is disclosed (page 2 line 47).

Reiners et al teach making a polymer using tin octoate (column 18 example 5). Filtration over active charcoal to obtain a colorless product is disclosed (column 18 lines 44-45).

It would have been obvious to one of ordinary skill to purify the polymer of Bodmer et al using activated charcoal in view of the teaching in GB '422 to use a conventional purification technique and further in view of the teaching in Reiners et al that, in a method of making a polymer using Sn octoate, the beneficial effect of purification to clarity is achieved using activated charcoal.

Art Unit: 1616

As to the particular degree of purification, an optimal such degree can be achieved by routine experimentation, especially in view of the Reiners et al teaching of purification to clarity.

No claims allowed.
